The Serious and Delirious Use of Chemistry in Movies

Dr. John J. Fortman

Professor Emeritus of Chemistry, Wright State University

Alamo Drafthouse Theater, 1120 S. Lamar Blvd.

(see p. 3 for directions)

\$10 for members/adults, \$5 for students, FREE for 2008 volunteers

Please RSVP to (512) 636.1905 or email retrosynthesis@gmail.com

Talk Abstract

This presentation will begin with illustrations of brief mentions of chemistry in films where you might not expect it, like *The Graduate*, *It's a Wonderful Life*, *1776*, and *Bells on Their Toes*. Movies which feature science will then be contrasted between: then (the past) and now (the present); the real and the impossible; drama and comedy; and similar scenes in multiple movies. Featured clips will be selected from such films as *Apollo 13*, *Dante's Peak*, *Chain Reaction*, *It Happens Every Spring*, *The Man in the White Suit*, and *Smoke*. Several live chemical demonstrations related to the movie scenes will be interspersed with the videos.

Dr. John J. Fortman

John Fortman received the 2007 Helen M. Free Award for Public Outreach. He is Professor Emeritus of Chemistry at Wright State University, where he retired in 2001 after 36 years of teaching freshman and inorganic chemistry. He won seven different teaching awards over the years at Wright State, and in 1998 he was appointed the Robert J. Kegerreis Distinguished Professor of Teaching and received the CMA Catalyst Award for Outstanding Teaching of College Chemistry. Dr. Fortman received his B.S. from the University of Dayton in 1961 and his Ph.D. in physical inorganic chemistry from the University of Notre Dame in 1965. He has published over 50 papers in chemical education in addition to his research publications. With Ruben Battino, he has produced a seven-DVD set which includes ten hours of chemical demonstrations for use in middle school through college level classes in addition to a live show and blooper outtakes. For over 30 years he has done chemistry demonstration outreach shows for middle and high school students in the Dayton area, and he continues to inspire and fascinate over 8000 students each year with at least 17 shows. He has done workshops on teaching and demonstrations around the country. He has designed alternative courses for general chemistry, elementary chemistry, and chemistry for elementary education majors. His course for non-science students was cited as a model in the 1990 American Association for the Advancement of Science report "The Liberal Art of Science: Agenda for Action." The alternative general chemistry course was developed while he was a member of the General Chemistry Task Force of the ACS Division of Chemical Education. It starts with organic and biochemistry, moves through materials and finishes with energy. The course emphasizes applications and stresses bringing in principles only as they are necessary. The course has been characterized as being taught inside-out, upside-down, and backwards. Dr. Fortman's interests, in addition to demonstrations, course content, and organization, include the use of analogies and videotaped material. John has been an ACS member since 1962 and was Councilor for the Dayton Local Section from 1996 to 2004. Since he became an ACS Tour Speaker in 1991 he has given over 310 section talks, visiting 163 of the 190 different local sections while doing 65 tours including all 29 different tours at least once. He has presented in all 50 states and Puerto Rico.

Chair's Page

The Chemical Professional's Code of Conduct

The American Chemical Society expects its members to adhere to the highest ethical standards. Indeed, the Federal Charter of the Society (1937) explicitly lists among its objectives "the improvement of the qualifications and usefulness of chemists through high standards of professional ethics, education and attainments." The chemical professional has obligations to the public, to colleagues, and to science.

The original "Chemist's Creed" was approved by the ACS Council in 1965. The principles of the Chemist's Code of Conduct were prepared by the Council Committee on Professional Relations, approved by the Council (March 16, 1994), and replaced the Chemist's Creed. They were adopted by the Board of Directors on June 3, 1994 for the guidance of Society members in various professional dealings, especially those involving conflicts of interest. The Chemist's Code of Conduct was then updated and replaced by the Chemical Professional's Code of Conduct to better reflect the changing times and current trends of the Society. It was approved by Council on March 28, 2007 and adopted by the Board of Directors on June 2, 2007.

Chemical Professionals Acknowledge Their Responsibilities to the Public

Chemical professionals have a responsibility to serve the public interest and safety and to further advance the knowledge of science. They should actively be concerned with the health and safety of co-workers, consumers and the community. Public comments on scientific matters should be made with care and accuracy, without unsubstantiated, exaggerated, or premature statements.

To the Science of Chemistry

Chemical professionals should seek to advance chemical science, understand the limitations of their knowledge, and respect the truth. They should ensure that their scientific contributions, and those of their collaborators, are thorough, accurate, and unbiased in design, implementation, and presentation.

To the Profession

Chemical professionals should strive to remain current with developments in their field, share ideas and information, keep accurate and complete laboratory records, maintain integrity in all conduct and publications, and give due credit to the contributions of others. Conflicts of interest and scientific misconduct, such as fabrication, falsification, and plagiarism, are incompatible with this Code.

To Their Employer

Chemical professionals should promote and protect the legitimate interests of their employers, perform work honestly and competently, fulfill obligations, and safeguard proprietary and confidential business information.

To Their Employees

Chemical professionals, as employers, should treat subordinates with respect for their professionalism and concern for their well-being, without bias. Employers should provide them with a safe, congenial working environment, fair compensation, opportunities for advancement, and proper acknowledgment of their scientific contributions.

To Students

Chemical professionals should regard the tutelage of students as a trust conferred by society for the promotion of the students' learning and professional development. Each student should be treated fairly, respectfully, and without exploitation.

To Associates

Chemical professionals should treat associates with respect, regardless of the level of their formal education, encourage them, learn with them, share ideas honestly, and give credit for their contributions.

To Their Clients

Chemical professionals should serve clients faithfully and incorruptibly, respect confidentiality, advise honestly, and charge fairly.

To the Environment

Chemical professionals should strive to understand and anticipate the environmental consequences of their work. They have a responsibility to minimize pollution and to protect the environment.

Central Texas ACS: November 2008

Calendar of Events

Thursday, November 13th, 6:00 PM-9:00 PM

Alamo Drafthouse, 1120 S. Lamar Blvd.

Dr. John J. Fortman

“The Serious and Delirious Use of Chemistry in Movies”

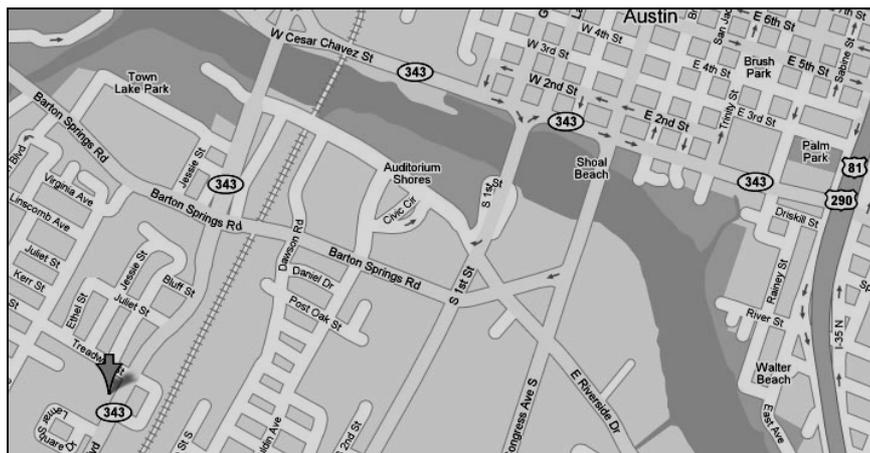

DIRECTIONS:

From Loop 1/MoPac:

Take **W. 5th St. Exit**, then take a **right** onto S. Lamar. Alamo Drafthouse will be on your **right** just after Treadwell St.

From I-35:

Take **Exit 233** (Riverside Dr.) and go **west** on Riverside for about 1 mile. Take a **left** onto Barton Springs Rd. and continue 0.5 mi to S. Lamar Blvd. Take a **left** on S. Lamar. Alamo Drafthouse will be on your **right** just after Treadwell St.

Birth Announcement

Congratulations to Central Texas ACS Chair Betsy Shelton and her husband Todd on the birth of their son, Julian Douglas Shelton, on September 26th, 2008!
(8 lb. 1 oz., 20 in.)

2008 National Chemistry Week Event at Austin Maker Faire

Central Texas ACS held its annual NCW event on October 18th at the Austin Maker Faire. Thank you to all our volunteers for helping to make it such a success! With about 70 volunteers and over 350 visitors to the Maker Kids' tent, we had the opportunity to share our love of chemistry with a lot of eager young minds. Special thanks go out to Education Manager Cybil Gustafson and the Austin Children's Museum for collaborating with us on this event.

Adriana Pavia	Jackie Padilla
Alejandro Parres	Jacqueline Pope
